Hi there Corporal Best,

Thank you for letting us know about the Multi-Geo search feature and the experience you are having. I tried to look for a previous case regarding this issue but was not able to find it. Can you verify if you have reached out to us before about this?

With that said, if you have reached out before about this, and this is a repeat I apologize. Can you ensure that you are using Chrome as your browser? If you are can you clear your cache and cookies for all time for me and attempt to search again using multi-geo search? I would also ask that you try the CSV download once again after the cache and cookies have been cleared.

Let me know if there is still an issue after that has been completed.

Stay safe,
Chris

Subject: Meta Data Download fail

Flock Safety support,

Since the Multi-Geo was not working properly(see below) I decided to search each location separately, download the metadata and use Excel to find the common license plates.

However when I try to download the Metadata, I get an error message.

Please fix the problem.

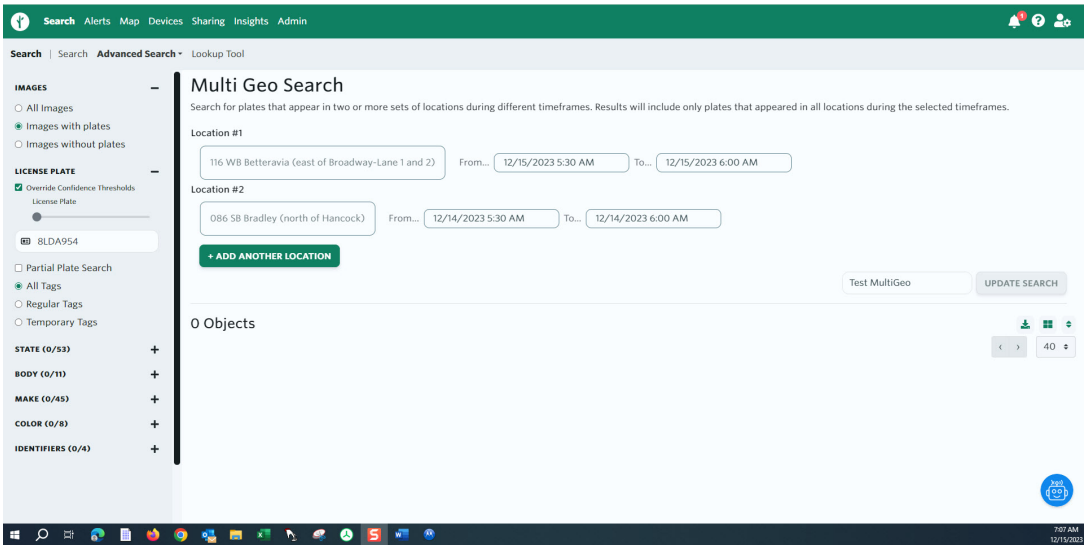
Subject: Multi-Geo search still not working

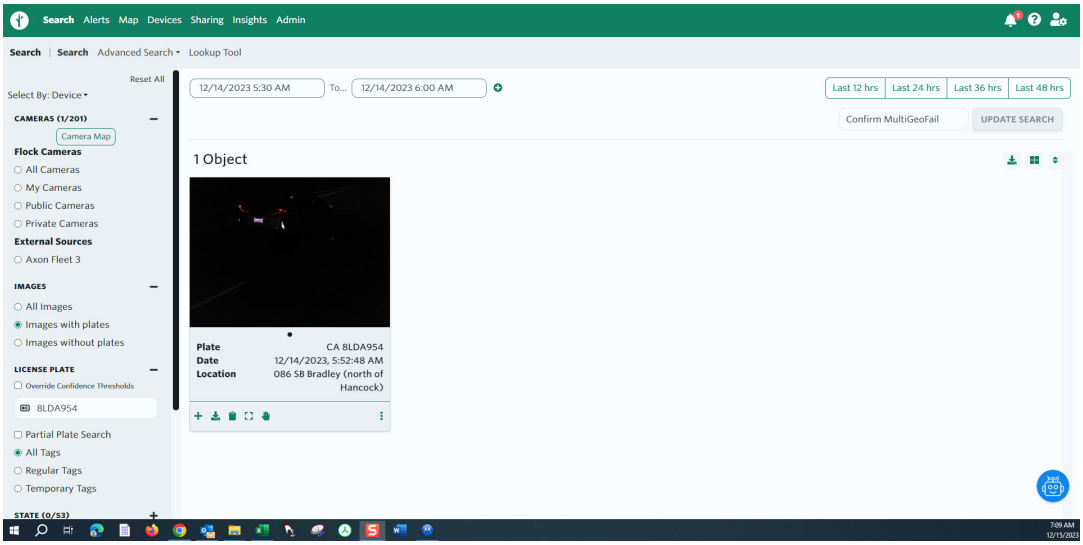
Flock safety support,

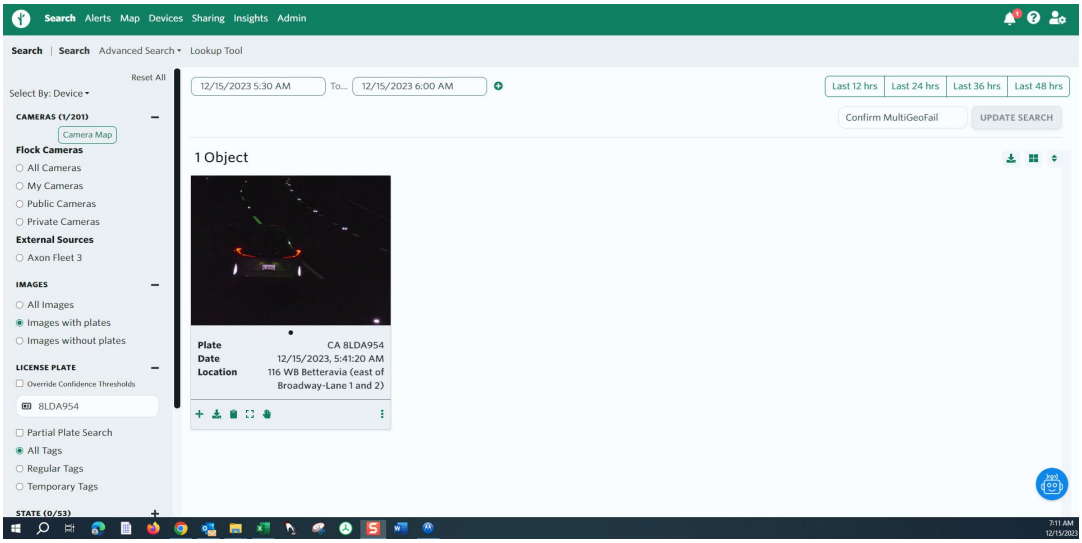
Multi-Geo search still is not working.

In testing, I ran a search for 8LDA954 for two locations cam 086 on 12/14 0530-0600 and cam 116 on 12/15 0530-0600…even overriding confidence level. Results=0



I confirmed that plate was present in both locations at the specified time frame.





Also….I see multi-Geo has descriptors. Can a search be run with no plate (or partial) by descriptors only?

Thank you
